

4500m LRF Module

JIO-M40X miniature laser rangefinder module adopts 905nm semiconductor laser components, with low power consumption, small size, stable performance and other characteristics, suitable for thermal imaging, night vision and other handheld mobile devices and miniaturized UAV pod equipment integration.

Measurement range: 5-4500 meters

Measurement of trees ≥3300 meters

Measurement of deer ≥ 1800 meters

Measurement accuracy ±1m

Weight ≤38g

1km LRF Module parameters

| | | |
|--------------------|----------|----------|
| Model | | JIO-M40X |
| Laser wavelength | | 905nm |
| Ranging capability | Building | 3500m |
| | Trees | 2500m |

| | |
|--------------------------------|---------------------------|
| Mini range | 5m |
| Resolution | ±0.1m |
| Operating Current | ≤180mA |
| Standby current | ≤20mA |
| Communication Interface | TTL / RS232 |
| Operating Temperature | -20°C~+55°C |
| Storage Temperature | -30°C~+60°C |
| Input Voltage | 3.3-5V |
| Beam divergence angle | 5 mard |
| Ranging Frequency | 1Hz |
| Power | ≤1 mW Safe for human eyes |
| Ranging method | pulse |
| Weight | 38g |
| Starting instantaneous current | DC3V power supply 2A max. |
| Size | ≤62.05x37x47mm |

JIO-M40X LRF Module Dimensions

JIO-M30X/M40X module pinout is defined as shown below

| Pin No. | Function description |
|---------|---|
| 1 | RS232-Tx |
| 2 | RS232-Rx |
| 3 | Power supply: DC (3.0V - 5.0V) |
| 4 | TxEN: When serial port starts to send data frame, TxEN signal is high; After one frame data transmission is over, TxEN signal is low. TxEN Signal can be used to switch from emission to reception as half duplex, such as RS485. |
| 5 | GND |
| 6 | UART-RxD (TTL: Voltage is programmable: 3.0V - 5.0V) ; |
| 7 | UART-TxD (TTL: Voltage is programmable: 3.0V - 5.0V); |

Note:

1. This module has 2 communication serial output, RS232 & TTL. Each can be used by different pin outs, but can't be used at the same time.
2. UART Setting: 10 bits are transmitted or received; one start bit, 8 data bits (LSB first), one stop bit, non-parity.

Electrical Characteristics

| Parameter | Test condition | Min | Max | Units |
|-------------------------|---------------------------|-----|-------|-------|
| Operating voltage (Vin) | T=25°C | 2.5 | 5.0 | V |
| Working current | Standby(T=25°C, Vin=3.0V) | - | 50.0 | mA |
| | Ranging(T=25°C, Vin=3.0V) | - | 150.0 | mA |

Module Communication Command Chart

| Master Command | | |
|-----------------------|---------------------------------|-------------------------|
| Command code | Description | Broadcast add. response |
| 0x80 | Read rangefinder status | NO |
| 0x81 | Read measuring result | NO |
| 0x83 | Start ranging | NO |
| 0x84 | Stop ranging | NO |
| 0x9E | Communication parameter program | YES |
| 0xBE | Read communication parameter | YES |
| 0xC0 | Communication test | YES |
| 0xC1 | Read Firmware Version | YES |
| 0x8F | Red Laser ON / OFF | YES |

Slave Response

| Recognition code | Description |
|------------------|-------------------------------|
| 0x60 | Simple reponse Frame |
| 0x01 | Range data frame |
| 0x20 | rangefinder status frame |
| 0x21 | Communication parameter frame |
| 0xE0 | Error message frame |

NOTE:

1. The Communication Frame Format:

SlaveID + instruction + parameter +checksum

2. The interval between two adjacent frames has to be at least the time of 1.5 byte when sent out, when it is less than 1ms, it is regarded as 1ms;

600BPS: 25ms

1200BPS: 12.5ms

2400BPS: 6.25ms

4800BPS: 3.125ms

9600BPS: 1.56ms

19200BPS: 1ms(0.78ms < 1ms, take 1ms)

3. Sending calculate of checksum;

This module uses the verification mode of byte by byte accumulation sum, SlaveID is not included in the verification, sending checksum at last.

Such as calculate check sum of scanning mode instruction "0x83 0x40":

A、Calculate accumulation sum : $0x83 + 0x40 = 0xC3$;

B、Take LSB[D7..D0]: 0xC3;

C、Calculate 2's complement: $0x100 - 0xC3 = 0x3D$, 0x3D is checksum;

Add slave address when master sends: 0x10 0x83 0x40 0x3D

4. Verification receipt;

Such as receive communication frame: 0x10 0x83 0x40 0x3D, verification not including slave address 0x10

A、Calculate accumulation sum: $0x83 + 0x40 + 0x3D = 0x100$;

B、Take LSB of accumulation sum: 0x00; 0x00 is verification result;

If verification result is 0x00, that means received data is right; If verification result is not 0x00, that means received data is wrong.

Module Command Description

Note: In the example, the slave address of each command is 0x10; in application, the slave address will be the programmed one.

1、Communication test (0xC0) ;

| Master sends | | |
|------------------|-----------|-------------|
| Command code | Parameter | Description |
| 0xC0 | None | |
| Slave responses | | |
| Recognition code | Parameter | Description |
| 0x60 | None | |

Example

Master sends: 0x10 0xC0 0x40; 0x40 is checksum
 Slave response: 0x10 0x60 0xA0; 0xA0 is checksum

2、Command slave to start ranging (0x83);

| Master sends | | |
|---------------------|-----------|---|
| Command code | Parameter | Description |
| 0x83 | byte1 | D7: Reserve |
| | | D6: Continuous ranging mode, 0 = off; 1 = on; |
| | | D5: Fog mode, 0 = off; 1 = on; |
| | | D4: Data unit, 0 = meter; 1 = yard; |
| | | D3 - D0: Working Mode, 0 = ranging; 1 = speed; 2 = Small Target Mode; |

Slave responses

| Recognition code | Parameter | Description |
|------------------|-----------|--|
| 0x60 | None | If slave is set as automatic export mode, slave responds 0x60 first after reception of start ranging command, after ranging is finished, it will then send out ranging result; |

Example

Master sends:

0x10 0x83 0x00 0x7D: Mode 0 is for single measure, data unit is meter;
 0x10 0x83 0x40 0x3D: Mode 0 is for continuous mesure, data unit is meter;
 0x10 0x83 0x10 0x6D: Mode 0 is for single measure, data unit is yard;
 0x10 0x83 0x20 0x2D: Mode 0 is for continuous mesure, data unit is yard;

Slave response:

0x10 0x60 0xA0;

- Note: 1、If module data export method is set as query mode, then it can only do single measure;
 2、In speed mode, continuous ranging function is null, that is no continuous speed measure;
 3、Fog mode is only valid for device with fog mode function;
 4、Slave will send 0x60 response frame after reception of start ranging command, it will start to send ranging result after ranging is finished.
 5、Small Target Mode was supported only in V7.00 or newer version;

3、command slave stop ranging(0x84);

Master sends

| Command code | Parameter | Description |
|--------------|-----------|-------------|
| 0x84 | | |

| | | |
|------|------|--|
| 0x84 | None | |
|------|------|--|

Note: After master sends command to slave to do continuous ranging, it needs to send this command to slave to stop ranging. If master sends command to slave to do single time ranging, then no need to send this command, cause slave will stop ranging automatically after ranging is finished.

4、 reading slave status(0x80);

| Master sends | | |
|------------------------|-----------|---|
| Command code | Parameter | Description |
| 0x80 | None | |
| Slave responses | | |
| Recognition code | Parameter | Description |
| 0x20 | byte1 | D7: 1 = Busy; 0 = Ranging finished, Master can read result; D6: 1 = Module has some error; D5 - D2: Reserve; D1: 1 = Angle sensor enabled; D0: 1 = Angle sensor has some error; |
| | byte2 | Reserve |

5、 read range finder result(0x81);

| Master sends | | |
|------------------------|-----------|--|
| Command code | Parameter | Description |
| 0x81 | None | |
| Slave responses | | |
| Recognition code | Parameter | Description |
| 0x01 | byte1 | D7: 1 = Distance is invalid; D6: 1 = Angle is invalid; D5: Data resolution, 0 = 0.5/LSB; 1 = 0.1/LSB; D4: Data unit, 0 = meter; 1 = yard; D3 - D0: Working Mode, 0 = Ranging; 1 = Speed; |
| | byte2 | When distance is valid: Distance[D15..D8]; When distance is invalid: 0x80 = Ranging no result; 0x81= System error; |
| | byte3 | When angle is valid: Distance[D7..D0]; When angle is invalid: Reserve; |
| | byte4 | Angle[D7..D0]: Data is 2's complement format; When measuring speed, not sending angle data; |

Example

1、 slave sends distance frame: 0x10 0x01 0x20 0x12 0xD7 0xFE 0xF8
 distance value = 0x12D7 = 4823 = 482.3m
 angle value = 0xFE = -2°

2、 slave sends speed frame: 0x10 0x01 0x21 0x03 0xD7 0x04
 speed value = 0x03D7 = 983 = 98.3km/h

3、 slave sends distance frame: 0x10 0x01 0xA0 0x80 0x00 0x01 0xDE
 distance value null (First byte is 0xA0, D7 = 1)
 angle value = 0x01 = +1°

6、 write slave communication baud rate(0x9E);

| Master sends | | |
|---------------------|-----------|--|
| Command code | Parameter | Description |
| 0x9E | byte1 | has to be 0x90 |
| | byte2 | Reserve |
| | byte3 | Reserve |
| | byte4 | baud rate setting: 0 = 1200BPS; 1 = 2400BPS; 2 = 4800BPS; 3 = 9600BPS; 4 = 19200BPS(Default); |

| Slave responses | | |
|---|-----------|-------------|
| Recognition code | Parameter | Description |
| (please refer to the slave respons part of reading slave parameter) | | |

| Example | | |
|--|--|--|
| If master sends frame: 0x10 0x9E 0x90 0x00 0x00 0x04 0xCE; It's means: Set baud rate of slave as 19200BPS, | | |

Note:New baud rate is only valid after module is restarted;

7、 write slave address(0x9E);

| Master sends | | |
|---------------------|-----------|--------------|
| Command code | Parameter | Description |
| 0x9E | byte1 | Must be 0x91 |

| | | |
|---|-----------|--|
| | byte2 | Reserve |
| | byte3 | Reserve |
| | byte4 | slave new address(slave address can't be 0); |
| Slave responses | | |
| Recognition code | Parameter | Description |
| (please refer to the slave respons part of reading slave parameter) | | |
| Example | | |
| To write slave address as 0x20, then master sends: 0x10 0x9E 0x91 0x00 0x00 0x20 0xB1 | | |

- Note: 1. New slave address is valid after the device is restarted
 2. 0x00 is broadcast address, so slave address can't be set as 0x00;
 3. Default slave address is 0x10;

8、write measured result export method(0x9E);

| Master sends | | |
|---|-----------|---|
| Command code | Parameter | Description |
| 0x9E | byte1 | Must be 0x92 |
| | byte2 | Reserve |
| | byte3 | Reserve |
| | byte4 | Measured result export method selecttion: 0 = Query mode(slave can only export data when master sends reading command) 1(Default) = Automatic mode (After ranging finished, it sends out data automatically); |
| Slave responses | | |
| Recognition code | Parameter | Description |
| (Please refer to the slave respons part of reading slave parameter) | | |
| Example | | |
| To change data export to automatic exporting, then master sends: 0x10 0x9E 0x92 0x00 0x00 0x01 0xCF | | |

9、Set UART IO voltage (0x9E);

| Example | | |
|----------------|-----------|--------------|
| Command code | Parameter | Description |
| 0x9E | byte1 | Must be 0x93 |

| | | |
|---|-----------|--|
| | byte2 | Reserve |
| | byte3 | Reserve |
| | byte4 | UART IO voltage Setting: 72 - 199, 0.025V/LSB; |
| Slave responses | | |
| Recognition code | Parameter | Description |
| (please refer to the slave respons part of reading slave parameter) | | |
| Example | | |
| Change UART IO voltage to 3.3V, then master sends: 0x10 0x9E 0x93 0x00 0x00 0x84 0x4B | | |

Note: VIO = Setting * 0.025V, Default VIO = 3.3V

10、Reading communication parameter (0xBE);

| Master sends | | |
|------------------------|-----------|---|
| Command code | Parameter | Description |
| 0xBE | byte1 | Must be 0x91 or 0x92 |
| Slave responses | | |
| Recognition code | Parameter | Description |
| 0x21 | byte1 | Slave address: 0x01 - 0xFF |
| | byte2 | D4: Data export method ; D3 - D0: Baud Rate setting; |
| | byte3 | UART IO voltage setting |

11、Slave sends wrong information (0xE0) ;

| Slave responses | | |
|------------------------|-----------|---|
| Recognition code | Parameter | |
| 0xE0 | byte1 | D7 - D3: Reserve; D2: 1 = Communication parameter error; D1: 1 = Unrecognizable command; D0: 1 = Checksum error; |

12、Red Laser On/Off (0x8F) ;

Master Sends

| Command Code | Parameter | |
|--------------|-----------|---|
| 0x8F | byte1 | 0x00: Red laser OFF; 0x01: Red laser ON; |

13、 Read Firmware Version(This command was supported only in V7.00 or newer version;) ;

| Master Sends | | |
|--|------------|--------------------|
| Command Code | Parameters | |
| 0xC1 | Not | |
| Slave responses | | |
| Recognition code | Parameters | illustrat |
| 0x61 | Byte0 | Majo Version(BCD) |
| | Byte1 | Minor Version(BCD) |
| Example | | |
| Slave responses: 0x10 0x61 0x07 0x00 0x98 Data "0x07 0x00" means firmware version is V7.00. | | |
